

Quality is our Advantage

Lubricants ■ Lubrication Technology

Along with a wide lubricant portfolio, LUBCON offers innovative solutions in lubrication technology. This enables us not only to help you with the selection of the best suited lubricant for your application, but also to improve the optimisation of your manufacturing process.

Among others, our product range includes:

Greases and Pastes

High Temperature Greases

Greases for the
Lubrication of Ball Screws

Assembly
Pastes

Bearing Greases

Vacuum Greases

Transfer
Greases

Gear Greases

Hydraulic Greases

Compressor
Greases

Oils

High Temperature Oils

Cutting Oils

Silicone Oils

Chain Oils

Vacuum Oils

Transfer Oils

Gear Oils

Hydraulic Oils

Compressor
Oils

Sprays

Pastes

Dispersions
Suspensions
Emulsions

Powders

To simplify the maintenance and service of your machines, LUBCON offers a wide choice of packaging units and product designs.

Lubricants and Lubrication Technology from **One** Supplier

The requirements in modern production plants have become continuously more complex. Reducing production times and increasing service life of machines requires the highest precision and reliability. LUBCON is the partner by your side, worldwide.

Lubricants have always been an integral part of mechanical components and have an essential influence on the function, performance and lifetime of equipment. Beginning at the machine design phase, lubrication has to be incorporated.

Today's machines must endure high temperatures, huge load capacities, aggressive environmental conditions, extreme speeds and extraordinary application demands. These machines require new and high-grade lubrication technologies to ensure economical and efficient production.

In order to substantially improve reliability and performance, LUBCON has developed and tested a wide product portfolio of high-tech special lubricants in close collaboration with machine equipment manufacturers.

LUBCON not only assists you in selecting the best lubricant, but also advises you regarding appropriate lubrication techniques. With expertise in both lubricants and application techniques, we are able to meet your individual requirements and offer innovative solutions for all your lubrication needs. From minimising friction and wear up to the systematic application and supply of lubricants, LUBCON is your full service provider.

Quality Starts with the Selection of the Raw Materials

LUBCON's continuous scientific development and research in the fields of tribology and the close collaboration with our suppliers and OEM (Original Equipment Manufacturers) ensures the highest quality of our products as well as new innovations.

The utilisation of specially selected high quality raw materials such as oils and additives, guarantee the continuous quality standards of our products worldwide. This is the base for the excellent performance of LUBCON lubricants.

The quality of our raw materials is assured through careful scrutinisation and control from receipt. Further processing has to be approved by our in-house laboratory. All steps during the manufacturing process are subject to stringent production controls, thus ensuring the highest quality standards.

The combination of latest production technologies and our qualified staff continuously secures and improves the quality of our products and processes. This enables us to attain our future goals.

We also attach importance to contribute to the protection of environmental resources by adhering the quality and environmental standards described in DIN EN ISO 9001 and 14001.

High Performance Lubricants for the Industry

Industrial applications require unique solutions. LUBCON offers a sophisticated product range, which has been developed and successfully tested in cooperation with machine equipment manufacturers over many years.

Lubricants carry loads and are directly exposed to thermal and mechanical operating conditions. Choosing an inappropriate lubricant or lubrication technique may considerably decrease the lubrication efficiency and even result in total failure of components. Premature breakdown and associated production losses are the consequences.

In order to avoid unnecessary costs and to improve the reliability of the machine components, modern lubricants as well as intelligent lubrication technologies are required. Lubricants produced by LUBCON, not only reduce friction and wear but also increase operational reliability. An optimum selection and application of lubricants can significantly contribute to the reduction of unexpected production breakdowns.

Regardless of extreme cold, heat, humidity, load, aggressive media or extreme speed – our product diversity covers every demanding application. This results in optimum lubrication capabilities and reliable performance of machinery at all times.

There are special requirements for applications in the food industry or in areas where lubricants may come in direct contact with food. LUBCON offers a wide range of lubricants which are recognised as physiologically harmless. These meet the requirements of the NSF/InS and are also mostly certified as Halal and/or Kosher.

BAM

From Development Stage to the Final Product...

■ Corrugated Industry

The highly demanding production conditions in the corrugated industry require bearing lubricants which are designed for extreme operating conditions and feature long lubrication cycles for high volume production. In addition to the wide range of food grade cutting, hydraulic, gear, cleaning and conservation oils, LUBCON offers a novel technology of bearing lubricants to be used in high temperature applications. The unique combination of perfluorinated polyether (PFPE) and lithium thickener, as our product Turmotemp LP 2502, offers optimum protection against corrosion and wear at operating temperatures up to 260 °C (482 °F).

■ Paper and Printing Industry

Machine parts in the printing and paper industry are continuously exposed to high loads. A few of the challenges for lubricants are extreme amounts of water and humidity when cleaning the wooden fibres, high temperatures in the drying ovens as well as the finest and abrasive paper fibres, which deposit on bearings, joints, cutting discs, chains, linear and ball guides. The complexity of every machine part and the extraordinary operating conditions were our incentive to develop sophisticated and high performance lubricants. LUBCON lubricants are custom engineered for the requirements of modern paper and printing machines and offer the required precision and operational safety.

■ Food, Beverage and Pharmaceutical Industry

Increasingly stringent health and safety regulations, the usage of partly aggressive media as well as the high performance requirements of the machine, place enormous strain on the lubricants for the food and beverage industry.

The odourless and tasteless greases and oils from LUBCON are versatily applicable at lubricating and friction points in the food processing industry. The certified lubricants fulfill the high requirements of the NSF/InS guidelines and are mostly certified as Halal and/or Kosher. The products support extreme operating conditions, increase the performance of the production equipment and are classified as physiologically safe – a precondition for application in food and beverage processing plants.

■ Machine Tool Industry

Increasing productivity, combined with high standards in health and safety as well as environmental protection, requires high reliability and precision of modern tool machines. In order to secure optimum production, safety and process stability, even under critical conditions, LUBCON offers a very wide spectrum of greases, oils and pastes as well as technical support. Through a long-standing partnership with manufacturers of tool machines and spindles, we were able to create a range of highly sophisticated products, which meet the performance requirements of modern machinery. Excellent wear protection, noise reduction, adhesion and pressure absorption as well as media resistance allow a huge increase of lubrication intervals while increasing efficiency.

...We Are There at All Stages

■ Wood Working Industry

High speeds and high temperatures generated by moving components, places high demands on lubricants in modern production plants and especially in the wood working industry. The increase in quality standards and productivity as well as the decrease of operating costs are the most prevalent demands of machine manufacturers and end-users. In order to meet these requirements, LUBCON's high performance lubricants not only fulfil the application specifications but also help machine operators to considerably reduce operation costs. Lower friction values reduce oil consumption and evaporation losses while maintaining constantly high efficiency levels.

■ Textile Industry

Our lubricants for the textile industry have been especially developed for long-term and life-time lubrication. The product portfolio contains efficient lubricating greases, oils and pastes for numerous applications in cotton or synthetic fibre machines, knitting and weaving as well as textile finishing machines to significantly reduce friction and wear. Latest technologies improve bearing service life and reduce residue formations, thus allowing reduced heat generation and permitting energy cost savings. Excellent adhesion properties as well as high wear protection of our lubricants considerably extend lubrication intervals and increase operational safety.

■ Bearing Industry

In order to achieve durable operation as well as high safety and bearing efficiency, three important parameters have to be considered: temperature, load and rotational speed.

LUBCON high performance lubricants successfully surpass various qualification testing of well-known bearing manufacturers, in the laboratory as well as in practice. This is achieved by reaching excellent running capacities and speed values up to 3.0 Mio. nxd_m. Our highly sophisticated lubricants are temperature and load resistant and specifically tailored to the application requirements. They offer excellent lubricating properties for any bearing type and application.

■ Vacuum and Nuclear Industry

Modern industry is difficult to imagine without vacuum technology which is used in numerous applications in different areas. Due to various processing media as well as extraordinary operating conditions high demands are being placed on lubricants. Therefore, lubricants should be matched to specific processes. Besides an optimum lubrication capability, LUBCON lubricants show good sealing behaviour, significantly reduce heat at the friction points and offer excellent corrosion protection over a long period. Regardless whether fittings, seals, bearings or gears: Our special lubricants are applicable within the vacuum range up to 10⁻⁹ mbar. They considerably extend the oil change intervals and offer high oxidation stability as well as high pressure, vacuum and media resistance.

Optimum Maintenance – More Important than Ever...

Our experienced and qualified staff makes LUBCON your competent partner for customer-oriented solutions in all lubrication techniques. Not only do we offer efficient automatic lubrication but also integral solutions in maintenance.

Maintenance quite often results in compromises, which are not always beneficial to operational safety. Thorough maintenance requires well-trained staff and seems to be in conflict with production capacity. Experience shows that lubrication is often being handled under time constraint. The result is most often over or under lubrication which can cause premature bearing failures. More than 60% of all early bearing failures can be attributed to insufficient maintenance.

Automatic, user-friendly lubricating devices enable an optimum lubrication of rolling bearings and other machine components. They considerably extend maintenance intervals and permit a performance oriented and cost-efficient operation.

Practice-oriented educational seminars for maintenance staff, which are held in our facilities as well as at the customer's location, contribute to a better understanding of lubrication technology. Within Total Lube Management and in close cooperation with the customer, we organise the customers' lubricant stock and handling upon request. This enables just-in-time delivery of our products and assures the proper utilisation of the lubricant for the right application.

Our **Experts** are at your Side at Any Time

Customer satisfaction is our top priority. Along with a well equipped laboratory for research and development LUBCON established a worldwide distribution network with qualified partners. This network allows flexibility, customer proximity and professional service.

Specialists from different industrial areas are working intently to satisfy the individual requirements of our customers – an important prerequisite for lubricant development and optimum lubricant selection.

LUBCON provides you with the needed support, whether you are designing a new production line, converting your existing machines, need support to optimise your lubricant supply or you simply decide to organise your lubricant stock.

Our worldwide networked team of experienced chemists, technicians and engineers assists you with every lubrication inquiry, starting from the appropriate lubricant selection up to the proper utilisation and storage of the products.

Advanced calculation methods, an extensive test field and an innovative team are available for you at any time. We will consult with you on every application and type of bearing as well as lubrication techniques to ensure optimum efficiency.

The consolidated knowledge of our experts in analyzing bearing failures is also at your service. Sophisticated analysis methods of bearing components, lubricant analysis as well as a systematic survey of operation conditions are utilised and well documented.

With your collaboration we get to the root cause of damage, compile solutions and support you throughout the entire improvement process.

Together we make Plans for the Future

From development and design up to worldwide distribution: Our work is the foundation for the confidence placed by our customers and sales partners in the performance of our first-class products. This has been our mission for over 35 years.

LUBCON produces more than 2600 different products and offers the perfectly suited lubricant for various applications in nearly every industrial area. The comprehensive stock and the just-in-time production system secure a quick and on-time delivery of the required product all around the world. LUBCON lubricants are available in various packaging sizes, which enable us to supply the customer with the correct and most suitable quantity.

The handling of lubricants requires appropriate equipment and

qualified staff; from the oil dispenser to complex central lubrication systems, from the dispatch of data sheets to the technical training of your local maintenance staff. All factors contribute to achieve an optimum lubricant supply that will lead to increased performance for your processing plant.

We can help you organising and rationalising your lubricant stock, create demand planning and secure long-term availability of the required lubricants.
